

# LaSalle International Partners with BBMP for Indian Energy Project

---

Chatsworth, CA, August 14, 2015 – Leading global engineering and development company LaSalle International Inc. announces a mutual collaboration on energy project with Bruhat Bangalore Mahanagara Palike (BBMP). On its initiation, the project will focus on the conversion and development of Waste to Energy plants in the Indian city of Bangalore. The dynamic waste to energy project plans on processing over 4000 MT of garbage.

According to a [post](#) on thehindu.com, “Bangalore fares worse than Delhi in air pollution.” The research used data from the CPCB (Central Pollution Control Board) and state pollution control boards to come up with the conclusion. The conclusions seem to fare worse as compared to similar surveys conducted in 2014.

A total of four plants are being planned for development in the area of Karnataka. Each of the plants will be capable of processing over a thousand metric tons of garbage in a day. The primary aim of the project is to eliminate toxic landfills and control air pollution in the city.

When asked about the value of the project, president of LaSalle International Pierre Lasalle had this to say, “Energy conversation is a challenge in underdeveloped nations. Bangalore is one of the most polluted cities in India. The power plants will be designed to emit very low emissions in order to curb air pollution. In this way, the project makes cheap energy consumption a possibility while making the air more breathable for residents.”

The global development company plans on incorporating avant garde plasma incineration technology for constructing the facilities which will be converting waste into usable energy. The eco-friendly process is also currently employed on air craft carriers across the globe.

## About LaSalle International Inc

LaSalle International Inc is a global enterprise that specializes in exploration, research, development, engineering, construction, and management solutions. Established in 2001, the firm has grown exponentially during the past decade. In addition to energy conservation LaSalle International also an industry leader in a range of markets especially in industries that are related to oil and gas exploration, environmental design as well as infrastructure solutions. The firm recognizes the importance of forging partnerships across borders and connecting companies with solutions that are as valuable as they are efficient.
